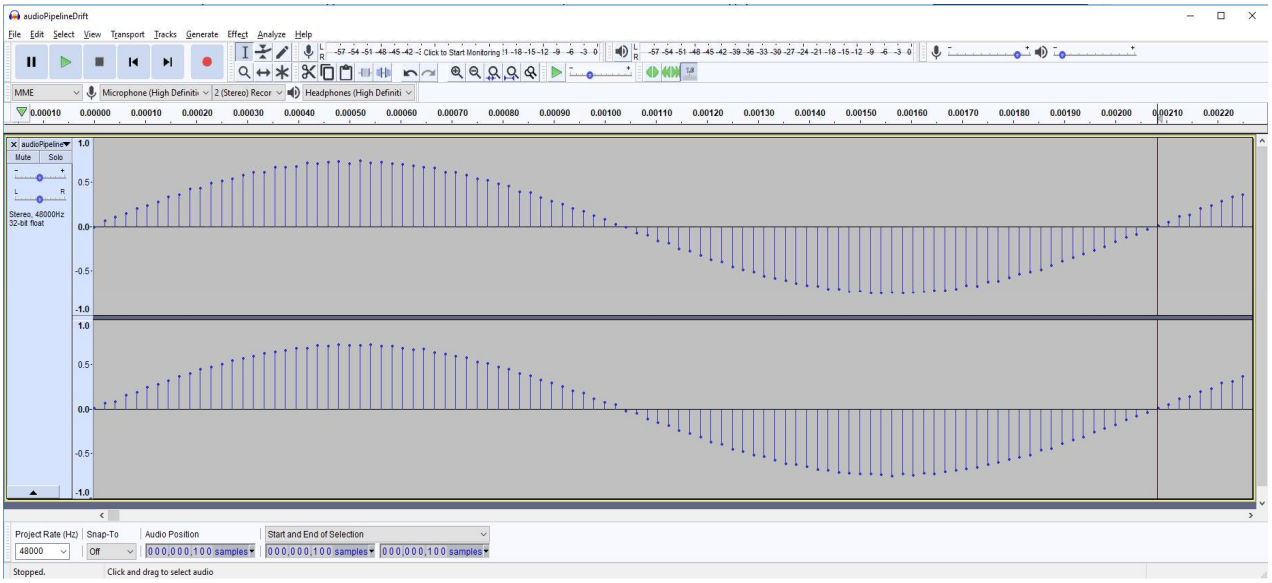
MRM PreQual Test for i.MX7D

Test results for the MRM Pre Qualification Test for i.MX7D

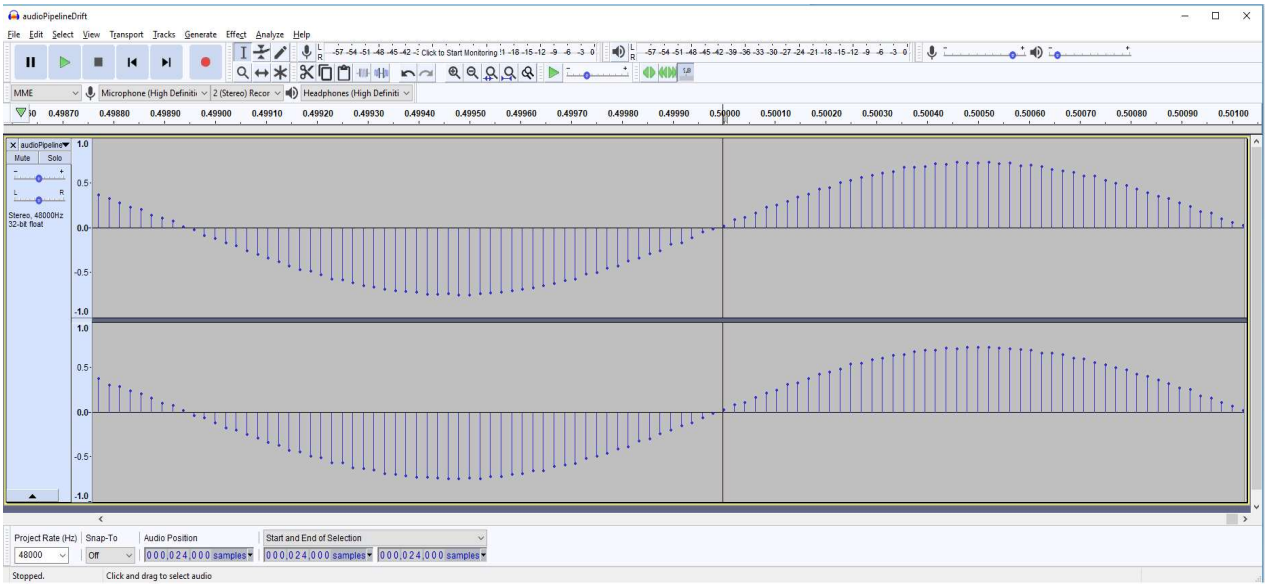
TEST 1: AUDIO PIPELINE DRIFT

Results

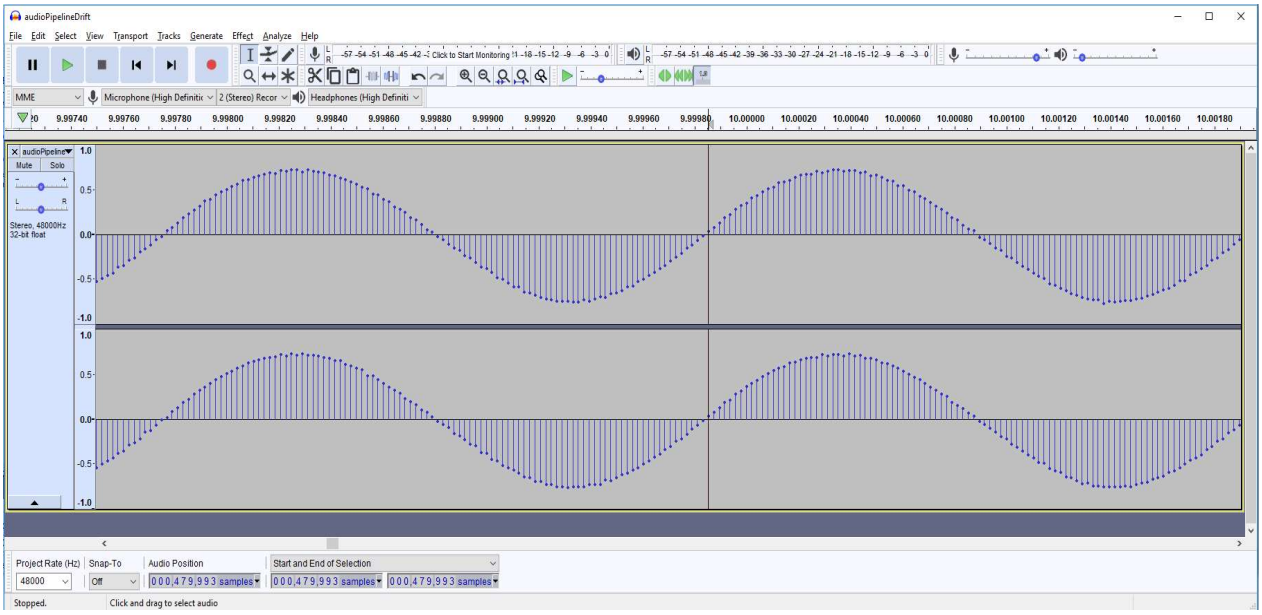
Observing a 1 cycle of the sine wave we can see there is exactly 100 samples per period



On a t = 0.5 seconds the upward-going zero crossing sample is at exact multiple of 100



However in a more significant t = 10s, the drifting is now visible.



Doing the calculations with: S1=0, S2=479993, T1=0s, T2=9.99985s

```
wavFileFrequency = 480
sampleRate = 48000
samplesPerPeriod = sampleRate / wavFileFrequency = 100
error_samples = (479993 - 0) – 100 * round((479993 - 0)/100) = 7
deltaT = T2-T1 = 9.99985 - 0 = 9.99985
error_PPM = 1.0E6 * (7 / 48000) / 9.99985 = 14.58
```

ERROR PPM = **14.58** which is < 20 PPM, so

TEST is PASSED

TEST 2: HIGH-RESOLUTION TIMER

Results

Test PASSED from observing console output
